## PROJECTS

### WorkOS – Internal Engineering Workflow & Incident Management Platform | [GitHub](#)

Feb' 2026 – Present

- Architected and implemented a centralized state-machine engine enforcing strict task and incident lifecycle transitions, preventing invalid or skipped workflow states across all defined roles and system operations.
- Established robust role-based access control (RBAC) mechanisms at the API layer, ensuring permission-bound actions, ownership validation, and secure workflow execution across multiple operational roles and responsibilities.
- Instituted immutable, append-only audit logging infrastructure, recording every workflow action and state transition to maintain complete traceability, accountability, and long-term historical data integrity.
- Engineered asynchronous background processing for SLA monitoring and automated escalation handling, ensuring timely deadline enforcement without blocking core application workflows.
- Tech Used: Node.js, Express.js, MongoDB, Mongoose, JWT, RBAC, REST APIs, Async Jobs, Queues, Middleware, Git/GitHub.

### CivicFix – Civic Issue Reporting, Accountability & Trust Platform | [GitHub](#) | [Link](#)

Jan' 2026 – Feb' 2026

- Designed and developed a scalable full-stack civic issue management platform with 4 distinct role-based user types (Citizen, Officer, Supervisor, Admin), enabling complete issue lifecycle tracking from creation to verified resolution.
- Implemented a robust state-machine-driven workflow engine with strict validation logic ensuring 100% valid status transitions and preventing unauthorized or inconsistent updates across all defined user roles.
- Built and optimized secure RESTful APIs with JWT-based authentication and role-based authorization middleware, reliably processing and managing 1000+ monthly complaint records with structured audit logging.
- Integrated a structured multi-step verification workflow where Officers submit resolution evidence with supporting media, Supervisors review and validate submissions, and the system automatically maintains a tamper-proof, end-to-end audit trail for accountability and compliance.
- Tech Used: React.js, Node.js, Express.js, MongoDB, Mongoose, JWT, REST APIs, RBAC, Middleware, Git/GitHub, Postman.

## TRAINING
